

The Offensive Security Platform for Modern Applications and APIs

Continuously attack modern applications to uncover real, exploitable risk, before attackers do.

Proactively Secure your APIs and Applications

Modern organizations are built on APIs, microservices, and complex application logic. Yet offensive security has remained largely static. Traditional penetration testing is periodic, slow, and disconnected from how applications actually behave in production. By the time testing is complete, applications have already changed and new risk has emerged.

Equixly changes this with a platform that integrates seamlessly into cloud-native architectures and CI/CD pipelines, providing a unified, continuously updated view of application and API risk. Security teams gain the confidence to take decisive remediation action while maintaining development velocity.

An AI Adversary That Thinks Like an Attacker

Deploy an autonomous, agentic AI that behaves like a real adversary. Equixly continuously explores applications, chains actions across APIs, adapts to responses, and evolves its tactics in real time to uncover complex attack paths and multi-step exploits before attackers do.

Continuously Discover and Attack Your APIs

Gain real-time visibility into your true API attack surface. Equixly automatically discovers exposed, undocumented, and fast-changing APIs and continuously attacks them as they evolve, dramatically reducing time-to-detection and time-to-fix.

Expose Business Logic and Workflow Abuse

Equixly understands application workflows, user journeys, and business rules to uncover logic flaws and abuse scenarios that enable privilege escalation, control bypass, and outcome manipulation.

Cut Through Noise. Fix What Matters.

Focus on real, exploitable risk. Equixly delivers high-confidence findings tied to demonstrated attack paths, reducing false positives and enabling security and engineering teams to prioritize remediation with confidence.

AI-Powered Penetration Testing for APIs

Powered by a proprietary Agentic AI Hacker, Equixly delivers continuous, autonomous offensive security that understands applications the way real attackers do. The platform actively discovers APIs, learns application behavior and business logic and launches attacks designed to expose real-world exploitability. The result is pre-emptive security that helps teams reduce risk continuously, protect revenue-critical systems, and stay ahead of AI-powered attackers.

OWASP API Top 10 Testing

Continuously test APIs against the OWASP API Top 10. Identify common and emerging API weaknesses as endpoints, logic, and authentication change.

API-Specific Vulnerability Testing

Continuously test for API-specific vulnerabilities, including authentication flaws, authorization bypasses, and logic abuse.

Sensitive Data & PII Classification

Automatically identify and classify sensitive, confidential, and PII data flowing through APIs to detect unintended exposure and insecure data.

Complete API Inventory

Continuously discover and maintain an up-to-date inventory of APIs of new, changed, and deprecated endpoints to eliminate blind spots and shadow APIs.

Compliance-Ready API Security

Continuously validate API behavior against regulatory and industry frameworks such as PCI-DSS, PSD2, ISO27001, and ASVS.

Instant Risk Visibility

Instantly surface exploitable risk across APIs and workflows. Prioritize issues based on real-world attack paths, so teams know what matters now.

Always-on visibility into the live API attack surface

Early discovery of business logic vulnerabilities

Real-time, context-rich risk insights

Reduced reliance on **slow, costly manual tests**

Security that scales with development velocity and threats

Start Getting Offensive.
Meet Your AI Adversary.

Industry Recognition: Gartner

Equixly is now recognized in the Gartner Hype Cycle for API security testing, further validating its leadership and technology maturity.

About Equixly

Equixly is a deep-tech cybersecurity company that automates API security testing through agentic AI. Its autonomous testing platform identifies complex business-logic vulnerabilities, enabling enterprises to scale security with software development. Equixly is backed by 33N Ventures, 360 Capital, Alpha Intelligence Capital, and JME Ventures, and recognised by Gartner, UniCredit and BCG for its pioneering work in agentic AI security testing.
